

ALWAYS keep develop branch UpToDate. Do this by,

1. Switch to develop branch: **git checkout develop**
2. Pull the changes: **git pull origin develop**
3. Change back to feature branch: **git checkout feature/branch name**
4. Merge the changes: **git merge develop**
5. Push the changes to origin: **git push -u origin feature/branch name**

Create a merge request:

After pushing any changes to origin, there is a link there to create a merge request.

Till the work is finish, it will be draft in title. After finish remove draft and fill out the template and checkboxes.

Removing last commit: **git reset --hard HEAD~1**

- Updating local list of remote branches: **git remote update origin --prune**

Remote branch list: **git branch -r. / -a**

Creating new branch: **git switch -C feature/branch_name**

Delete a branch: **git checkout master**

git branch -d branch_name

git push origin --delete branch_name

Fetch a remote branch: **git fetch origin**

git checkout --track origin/<remote_branch_name>
